

## LASH LIFT AFTERCARE

The first 24 hours after your treatment are critical and you MUST follow the steps below to ensure your lift does not drop and to ensure longevity of the treatment. At this early stage, your lashes are still delicate, and the lift is working its magic which means you need to be as careful as possible.

- Do not get your lashes wet within the first 24 hours. This includes but is not limited to excessive moisture and steam from saunas and baths.
- Do not apply makeup or receive any other eye treatment within the first 24 hours.
- Avoid touching or rubbing your eyes.
- Use a lash conditioner daily.
- Avoid putting contact lenses in for the rest of the day.
- Avoid sleeping on your front within the first 24-48 hours.
- After the first 24 hours, you can resume your normal daily life with your fabulous lashes.
